Fiber-Arch - Saves Your City Money on Drainage Projects

10-28-2009

Page #1 of 1

Florida City Saves \$31,000 Call Us to Find Out How Much Money Your City Will Save

The city of Cocoa Beach, Florida was faced with a potentially costly drainage pipe replacement. Instead of replacing the failed corrugated metal culvert, they chose to re-line the system using FiberSystems' Fiber-Arch FRP composite pipe. The city saved \$31,000 on a project involving just 38 feet of pipe!

In addition, Cocoa Beach avoided the following costly and disruptive activities:

- Excavation
- Heavy equipment usage to extract and replace the pipe
- Backfilling and street cuts
- Traffic re-routing and delays

Fiber-Arch

FiberSystems' Fiber-Arch FRP composite pipe can be used to re-line failing arch pipe, without sacrificing flow capacity, due to the superior flow characteristics of our smooth inner liner.

Elliptical Pipe

Fiber-Arch FRP composite pipe is available in sizes to allow relining of any of the corrugated metal pipe arch sizes. We can also provide oval and elliptical FRP composite pipe for the relining of failing concrete pipe.

Call us at 937-222-9000 today for the money saving solution to your city's drainage problems.

It Is Innovation That Sets Us Apart!
